

21 point scale for Core Programming, Visualisation and Data Analysis for Scientists - SCIF30005

Exercise

Mark	%	Feedback Criteria	Program criteria to be satisfied
20	100	<i>Excellent with outstanding aspects</i>	<ul style="list-style-type: none"> All parts of the exercise have been completed, performing all tasks asked for, with significant useful extra code which goes beyond the brief, e.g. a cell list approach. The code functions to a high standard, is clear and consistent, and robust with excellent programming style throughout and no errors. MPI parallelisation has been implemented, and multiple different optimisation approaches are compared, e.g. different data distribution strategies.
19	95		
18	90		
17	85	<i>Mostly excellent</i>	<ul style="list-style-type: none"> All parts of the exercise have been completed, performing all tasks asked for, with useful extra code which goes beyond the brief, e.g. a cell list approach. The code functions to a high standard, is clear and consistent, and robust with mostly excellent programming style and no errors. MPI parallelisation has been implemented, and multiple different optimisation approaches are compared, e.g. different data distribution strategies.
16	80		
15	75	<i>Mostly very good</i>	<ul style="list-style-type: none"> All parts of the exercise have been completed, performing all tasks asked for, and may contain some elements which go beyond the brief. The code functions to a mostly very good standard, is clear and consistent, and robust with very good programming style throughout with no major weaknesses and no errors. MPI parallelisation has been implemented, and different optimisation approaches are compared, e.g. different data distribution strategies.
14	70		
13	65	<i>Mostly good</i>	<ul style="list-style-type: none"> All parts of the exercise have been completed, performing all tasks asked for. The code functions to a mostly good standard, is clear and consistent, and relatively robust with good programming style with no major weaknesses. May contain minor errors. MPI parallelisation has been implemented, with thought given to optimisation, e.g. a data distribution approach with good load balancing.
12	60		
11	55	<i>Mostly satisfactory</i>	<ul style="list-style-type: none"> Most parts of the exercise have been completed, performing most tasks asked for. The code functions to a mostly satisfactory standard, with mostly satisfactory clarity and programming style but there may be one or more errors which prevents part of it running correctly. MPI parallelisation has been implemented but with no further optimisation.
10	50		
9	45	<i>Some satisfactory, some poor</i>	<ul style="list-style-type: none"> Most parts of the exercise have been attempted, performing some tasks asked for. The code works but errors prevent most of it working correctly, and/or the code may be less clear and lacking in consistency. MPI parallelisation has been implemented, though may contain some errors.
8	40		
7	35	<i>Mostly poor</i>	<ul style="list-style-type: none"> Some parts of the exercise have been attempted but not the majority. The code may contain serious errors and/or is unclear and lacks consistency. No attempt has been made to implement MPI, or the MPI contains serious errors.
6	30		
5	25	<i>Poor to unacceptable</i>	<ul style="list-style-type: none"> Most of the exercise has not been completed. The code contain serious errors. No attempt has been made to implement MPI.
4	20	<i>Mostly unacceptable</i>	<ul style="list-style-type: none"> Almost all of the exercise has not been completed. The code contains serious errors. No attempt has been made to implement MPI.
3	15		
2	10	<i>Unacceptable</i>	<ul style="list-style-type: none"> Almost all of the exercise has not been completed. The code is not functional. No attempt has been made to implement MPI.
1	5		
0	0		<ul style="list-style-type: none"> Work not handed in or no significant effort made to provide functional code.
